PHI India

Progression with Health & Innovation

IoT Platform

The Internet of Things (IoT) is revolutionizing industries, and PHI INDIA is at the forefront of this transformation. Our IoT Platform connects machines, devices, and systems seamlessly, enabling real-time monitoring, predictive analytics, and enhanced operational efficiency.

Our Expertise

Seamless Connectivity

Integration of IoT gateways and devices to create a unified, intelligent ecosystem. Reliable and secure data transfer between edge devices and the cloud.

Real-Time Data Monitoring

Advanced dashboards provide insights into machine performance and operational metrics. Continuous monitoring enables swift response to anomalies or malfunctions.

Comprehensive Analytics

Harness big data and AI-driven analytics to uncover actionable insights. Enhance decision-making with predictive maintenance and operational forecasts.

User-Friendly Applications

Intuitive backend systems and mobile apps designed for easy access and usability. Real-time alerts and notifications keep stakeholders informed.

The Internet of Things (IoT) is revolutionizing industries, and PHI INDIA is atthe forefront of this transformation. Our IoT Platform connects machines, devices, and systems seamlessly, enabling real-time monitoring, predictive analytics, and enhanced operational efficiency.

Success Story: SDP Machines Ajmer

IoT Solution for SDP Machine, Ajmer A notable implementation of our IoT expertise is with SDP Machine, Ajmer, where we deployed a comprehensive IoT solution for their granite cutting machines.

Key Highlights:

Integration with Siemens IoT Gateway: The IoT gateway collects data from the machines and securely sends it to our cloud infrastructure. Cloud-Based Data Storage: All operational metrics are stored on the cloud for scalable and secure data management. Mobile App & Backend System: Stakeholders can access machine performance, downtime data, and analytics through an intuitive mobile app and backend system. This solution has empowered SDP Machine to: Monitor machine performance remotely. Reduce unplanned downtime with predictive maintenance insights. Make data-driven decisions to optimize productivity and reduce operational costs.
